

§ 256.11

contours and these noise contours shall be plotted on maps accompanying AICUZ studies.

(d) Where previous studies have used CNR or NEF, for meters of policy, noise planning and decisionmaking, areas quieter than Ldn 65 shall be considered approximately equivalent to the previously used CNR Zone 1 and to areas quieter than NEF 30. The area between Ldn 65 and Ldn 75 shall be considered approximately equivalent to the previously used CNR Zone 2 and to the area between NEF 30 and NEF 40. The area of higher noise than Ldn 75 shall be considered approximately equivalent to the previously used CNR Zone 3 and to noise higher than NEF 40. The procedures shall remain in effect only until sufficient data to compute land values can be obtained.

(e) When computing helicopter noise levels using data collected from meters, a correction of +7db shall be added to meter readings obtained under conditions where blade slap was present until and unless matters are developed which more accurately reflect true conditions.

(f) Noise contours less than Ldn 65 or more than Ldn 80 need not be plotted for AICUZ studies.

(g) Since CNR noise levels are not normally directly convertible to Ldn values without introducing significant error, care should be exercised to assure that personnel do not revise previous studies by erroneously relabeling CNR contours to the approximately equivalent Ldn values.

(h) Where intermittent impulse noises are such as are associated with bombing and gunnery ranges are of importance such noises will be measured using standard "C" weighing of the various frequencies to insure a description most representative of actual human response.

§ 256.11 Effective date and implementation.

This part is effective immediately. Two copies of implementing regulations shall be forwarded to the Assistant Secretary of Defense (Installations and Logistics) within 90 days after publication of final rules.
